Problem Statement

"Cavity optomechanics", Aspelmeyer et al. 2014
Quantum Optomechanics, Bowen et al. 2015

Hamiltonian

Optical Cavity $\hat{a}$, $\omega_o(\hat{x}_{\text{mech}}) = \omega_o + \frac{g}{\omega_o}\hat{x}_{\text{mech}}$; mechanical oscillations $\hat{b}$, ω_m; coupling g; Drive E, ω_L

$$H = \underbrace{\omega_o\ a^\dagger a}_{\text{Cavity}} + \underbrace{\omega_m\ b^\dagger b}_{\text{Mechanical}} - \underbrace{g\ a^\dagger a\ (b + b^\dagger)}_{\text{Interaction}} + \underbrace{E(ae^{i\omega_L t} + a^\dagger e^{-i\omega_L t})}_{\text{Drive}}$$

Rotating Wave Approximation at ω_L with $\Delta = \omega_o - \omega_L$, $a \rightarrow ae^{i\omega_L t}$:

$$H_{\text{RWA}} = \Delta\ a^\dagger a + \omega_m\ b^\dagger b - g\ a^\dagger a\ (b^\dagger + b) + E(a + a^\dagger)$$

$\hbar = 1$

Quantum Optomechanics, Bowen et al. 2015 (2.3)

QuantumOptics.jl, (Optomechanical Cavity)

Hamiltonian Linearization

$$H_{\text{RWA}} = \Delta \, a^\dagger a + \omega_m \, b^\dagger b - g \, a^\dagger a \, (b^\dagger + b) + E(a + a^\dagger)$$

Linearize $a = \alpha + \delta a$, $b = \beta + \delta b$; with α, β steady state.

$$
\begin{aligned}
H_{\text{Interaction}} &= -g \, a^\dagger a \, (b^\dagger + b) \\
&\approx - \underbrace{g|\alpha|}_{G} \left(\delta a + \delta a^\dagger + \mathcal{O}(a^2 + \delta a \delta a^\dagger) \right) \left(\delta b + \delta b^\dagger + 2\beta \right)
\end{aligned}
$$

Therefore for small G:

$$H \approx \Delta \, \delta a^\dagger \delta a + \omega_m \delta b^\dagger \delta b - G(\delta a + \delta a^\dagger)(\delta b + \delta b^\dagger) + E(a + a^\dagger)$$

$$\sim \frac{\Delta}{2}(\hat{X}^2 + \hat{Y}^2) + \frac{\omega}{2}(\hat{Q}^2 + \hat{P}^2) - G\hat{X}\hat{Q} + E\hat{X}$$

Quantum Optomechanics, Bowen et al. 2015 (2.7)

Dissipation

Optical decay κ:

$$L_O = \sqrt{\kappa}\ \delta a$$

Mechanical resonator with γ and a thermal bath at the n-th thermal state:

$$L_M = \sqrt{\gamma(n+1)}\ \delta b + \sqrt{\gamma n}\ \delta b^{\dagger}$$

Quantum Optomechanics, Bowen et al. 2015 (2.8)

Implementation

truncated Fock Basis: $F_{\text{optical}} \otimes F_{\text{mechanical}}$

definition of H, J with $\delta a \otimes 1$

$\psi(0) = |0\rangle \otimes |0\rangle$

Time Evolution using the *Lindblad equation*:

$$\dot{\rho} = -i[H, \rho] + J\rho J^{\dagger} - \frac{1}{2}\{J^{\dagger}J, \rho\}$$

QuantumOptics.jl,

Time evolution of n

QuantumOptics.jl, (Optomechanical Cavity)

# Stochastic Master Equation

Lindblad Master Equation:

$$\dot{\rho} = -i[H, \rho] + J\rho J^{\dagger} - \frac{1}{2}\{J^{\dagger}J, \rho\}$$
Stochastic Master Equation:

$$\dot{\rho} = -i[H, \rho] + J\rho J^{\dagger} - \frac{1}{2}\{J^{\dagger}J, \rho\} + \left(C\rho + \rho C^{\dagger} - \text{Tr}(C\rho + \rho C^{\dagger})\right)\xi(t)$$

Let's look at the Quadrature $C = \eta\sqrt{\kappa}\left(\delta a + \delta a^{\dagger}\right)$

Expectation
